

ARE YOU FLU READY? Take time to get a flu vaccine

CDC recommends a yearly flu vaccine as the first and most important step in protecting against flu viruses.

- While there are many different flu viruses, a flu vaccine protects against the viruses that research suggests will be most common.
- Flu vaccination can reduce flu illnesses, doctors' visits, and missed work and school due to flu, as well as prevent flu-related hospitalizations.
- Everyone 6 months of age and older should get a flu vaccine every year before flu activity begins in their community. CDC recommends getting vaccinated by the end of October.
- [Children younger than 6 months](#) are at high risk of serious flu illness, but are too young to be vaccinated. People who care for infants should be vaccinated instead.

Take everyday preventive actions to stop the spread of germs

- Try to avoid close contact with sick people.
- While sick, limit contact with others as much as possible to keep from infecting them.
- If you are sick with flu symptoms, CDC recommends that you stay home for at least 24 hours after your fever is gone except to get medical care or for other necessities. (Your fever should be gone for 24 hours without the use of a fever-reducing medicine.)
- Cover your nose and mouth with a tissue when you cough or sneeze. Throw the tissue in the trash after you use it.
- [Wash your hands](#) often with soap and water. If soap and water are not available, use an [alcohol-based hand rub](#).
- Avoid touching your eyes, nose and mouth. Germs spread this way.
- Clean and disinfect surfaces and objects that may be contaminated with germs like the flu.

Signs and Symptoms	Cold	Flu
Symptom onset	Gradual	Abrupt
Fever	Rare	Usual
Aches	Slight	Usual
Chills	Uncommon	Fairly common
Fatigue, weakness	Sometimes	Usual
Sneezing	Common	Sometimes
Stuffy nose	Common	Sometimes
Sore throat	Common	Sometimes
Chest discomfort, cough	Mild to moderate	Common
Headache	Rare	Common
